The company

VOSS is partner to vehicle manufacturing and mechanical engineering companies, providing tubing and connection technology for fluid systems.

Thanks to its strong customer focus, its innovations and outstanding quality, the company – founded in 1931 – has developed into an international corporate group. VOSS Holding is the parent organization under which VOSS Automotive GmbH, VOSS Fluid GmbH and 11 foreign subsidiaries are grouped.

With production facilities in Austria and abroad and sales companies in Europe and overseas, VOSS is one of the top suppliers of fluid system components – “VOSS Automotive” serving the vehicle engineering and “VOSS Fluid” for the mechanical engineering sectors.

VOSS’s product range includes connecting elements, ready-to-install tubing, valves and other components for use in pneumatic, hydraulic, fuel and air-conditioning systems.

VOSS, as a development partner and system provider offering a comprehensive product range, is committed to active participation in ongoing decision-making processes in the fluid engineering industry.

Machine components for connection and coupling technology

A full product range plus top quality: this is the principle VOSS follows to produce one of the world's most comprehensive product ranges for tube coupling systems. The entire product spectrum is available as a catalogue.

The VOSS programme includes cutting ring, soft seal and flared couplings, tube forming systems, flange couplings and a wide range of accessories. VOSS puts special emphasis on the development of customized system solutions covering the entire task range – from initial planning, engineering production, assembly and installation, right up to special logistics services.

VOSS Fluid also offers convincing value-added services and improvement proposals that take purchasing costs, assembly and installation effort, durability of leak-tightness and long-term corrosion protection into account.

As a standard feature, all products in the extensive product range have optimum corrosion protection, provided by a top-quality VOSS coat surface finish containing no hexavalent chromium. Extensive salt-spray tests conducted in accordance with DIN EN ISO 9227 have shown that corrosion resistance is retained even after 1,000 hours of practical conditions, i.e. after handling and assembly.

VOSS Fluid's uncompromising quality policy and application-specific quality objectives, well documented in all certificates and approvals required by relevant trade associations and professional bodies, have ensured the company a top place in all its established markets.

With a wide range of system stocks all around the world and a global network of authorized trade dealers, VOSS ensures maximum product availability and highly economical delivery systems. These range from KANBAN full service right up to full optimization of the customer's supply chain.

VOSS Fluid also offers a wide range of special services, including regular training sessions and application-related publications. The internal and external logistics of the entire VOSS corporate group bring customers considerable cost advantages, allowing "just-in-time" production without having to maintain large stocks of their own.

VOSS corporate environmental policy

- 1** The management of the VOSS corporate group considers environmental protection to be an important part of business management and the basis of long-lasting company success.
- 2** VOSS employees are integrated at all levels into the group's efforts to protect and reduce the burden on the environment on a permanent basis, and their awareness for the environment is encouraged by training and other activities.
- 3** VOSS evaluates the impact of all new developments (both products and processes) on the environment with the aim of keeping this impact to a minimum.
- 4** The impact of activities on the local environment are regularly monitored and evaluated.
- 5** Where it is impossible to avoid negative impact on the environment, one of the company's explicit objectives is to continuously reduce this impact.
- 6** In order to put this policy into practice, defined procedures and specifications regulating the relevant technical and organizational procedures are in place within the company.
- 7** Working in close cooperation with authorities and customers, VOSS constantly determines and evaluates existing environmental protection requirements. This forms the basis for all our activities to constantly reduce existing environmental burdens and comply with statutory regulations.
- 8** The public, as well as any other interested persons and organizations can obtain information on our environment-related activities at any time.
- 9** VOSS encourages its contractual partners to apply the same standards as VOSS itself does.
- 10** Energy efficiency is a major consideration when acquiring plant, equipment and services.
- 11** We are constantly improving our energy balance by implementing dedicated measures.
